

## THE PROBLEM

Operational Control Centers (OCC) are stuck managing stovepiped, manually intensive workflows and a patchwork of single-purpose software tools.

### RESULTING IN

- ⚠️ Lack of situational awareness between operations
- ⚠️ Task saturation during high-tempo ops
- ⚠️ Procedure deviation resulting in safety & compliance issues
- ⚠️ Employee burnout leading to increased turnover and excess training costs

## THE SOLUTION

Use location intelligence to visualize, unify, plan, adapt and respond in real-time.

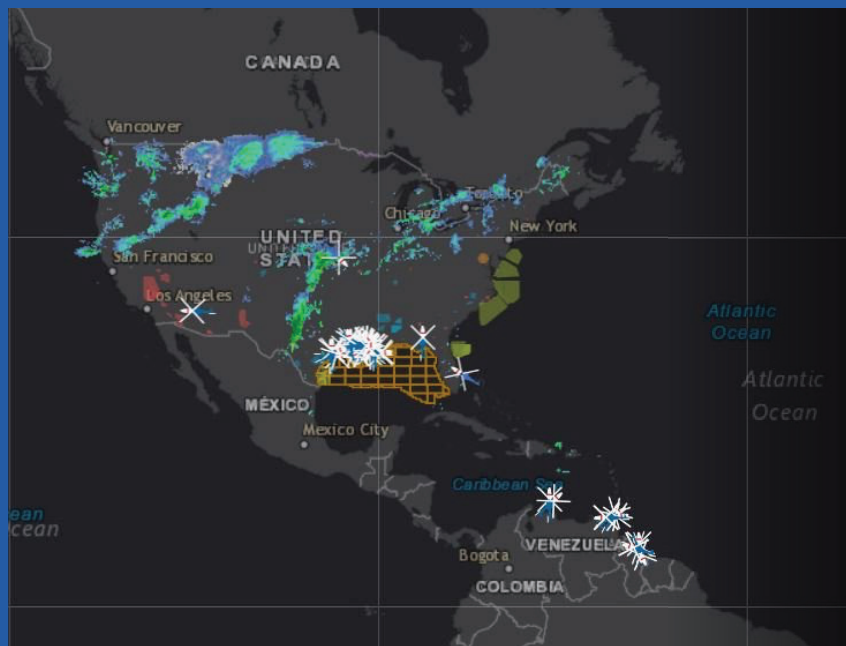

### DELIVERING

- ✅ Situational awareness across occ through maximizing automation and streamlining your process
- ✅ Reduce task saturation by anticipating and mitigating issues beforehand
- ✅ Prevention of procedure deviation by sending warnings and corrective actions when deviation occurs
- ✅ Enhancing of existing systems by combining existing systems with ESP Aviation

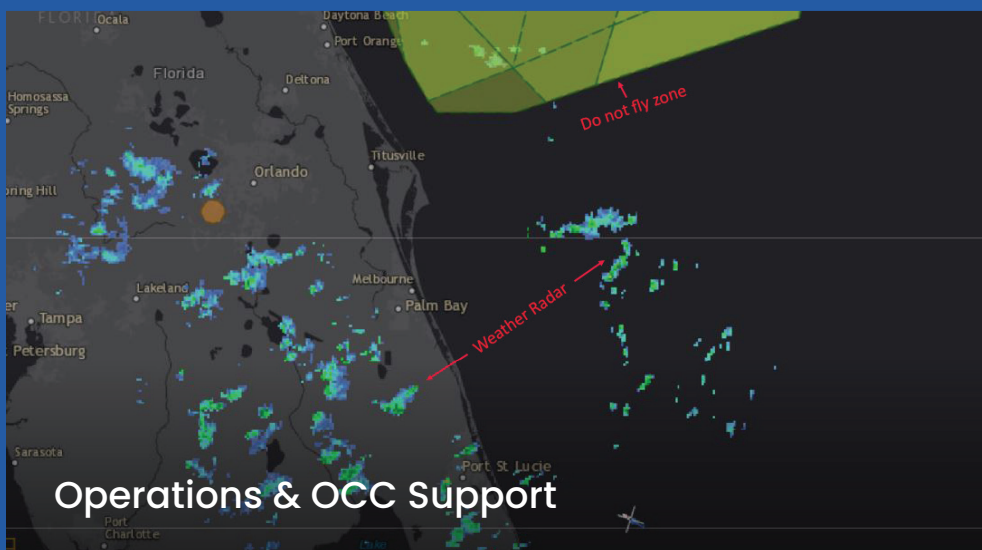

- Gathers and manages your data to help you gain strategic insights.
- Intuitive user interface for efficient task automation and streamlining.
- Tailored to your workflows and requirements.

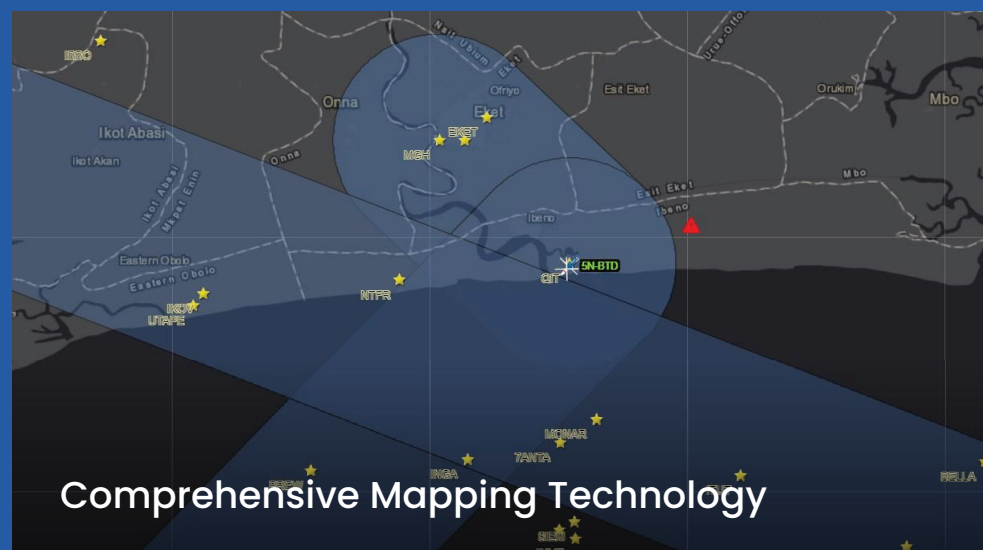

## Flight Safety

With ESP Aviation, you can identify and mitigate risks from pre-mission planning through flight execution. Set custom alerts for flight issues such as when flights are off course, off profile, failed to report, drastically drops altitude, and more.

## Operations & OCC Support

ESP Aviation offers simple and quick communications, plus comprehensive support from pre-flight planning through flight execution. Easily go between flight generation, flight monitoring, and supporting workflows. Improve your operation processes, including SMS, maintenance, material support, and more.

## Comprehensive Mapping Technology

ESP Aviation provides near real-time aircraft position and performance data and access to thousands of data layers such as real-time weather, traffic, NOTAM, etc. You can also auto-create or upload flight plans using locations of interest.

ESP provides experienced operational support to “on-demand” commercial air operations in the US and globally.

Our customers cite the reliability and availability of our aviation platform, and focus on safety as key to their brand loyalty.

We provide hands-on guidance to develop custom analytics solutions.
